Typescript Implementation

```
import { Locator, Page } from '@playwright/test';
```

```
export class MainMenuPage {
```

```
readonly page: Page;
readonly createOrderLink: Locator;
readonly writeEmailLink: Locator;
readonly logCallLink: Locator;
```

```
constructor(page: Page) {
  this.page = page;
  this.createOrderLink = page.locator('a#ext-gen606');
  this.writeEmailLink = page.locator('a#ext-gen624');
  this.logCallLink = page.locator('a#ext-gen650');
}
```

```
async clickCreateOrder(): Promise<void> {
  await this.createOrderLink.click();
}
```

```
async clickWriteEmail(): Promise<void> {
  await this.writeEmailLink.click();
}
```

```
async clickLogCall(): Promise<void> {
  await this.logCallLink.click();
}
```

```
async clickLinkByText(linkText: string): Promise<void> {
  const link = this.page.locator(`a:has-text("${linkText}")`);
  await link.click();
}
```

```
async isCreateOrderVisible(): Promise<boolean> {
  return await this.createOrderLink.isVisible();
}
```

```
}
```

```
async isWriteEmailVisible(): Promise<boolean> {  
    return await this.writeEmailLink.isVisible();  
}
```

```
async isLogCallVisible(): Promise<boolean> {  
    return await this.logCallLink.isVisible();  
}  
}
```
